## **DETAILED ACTION**

### ***Specification***

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

The use of the trademark "Delrin" has been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 16 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear what "resorbable" is referring to in line 2.

### ***Claim Objections***

Claims 1-22 are objected to because of the following informalities: Annulus is incorrectly spelled. Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

And

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5, 8-9, 12, 17, 19 and 21-22 are rejected under 35 U.S.C. 102(e) and claims 6-7, 10-11, 13-16, 18, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Felt et al. as cited in applicant's IDS. Regarding claims 1-5, 8-9, 12, 17, 19 and 21-22, Felt et al. discloses a disc augmentation device that restores disc height and pressure comprising an annulus augmentation device (balloon, 12) and a gas nuclear augmentation material (col. 5, lines 59-63). In addition, the nuclear augmentation material will inherently cause the growth or formation of material within the nuclear space whether by an inflammatory response, response to the forces exerted by the augmentation material, scarring etc.

Regarding claims 6-7, 10-11, 13-16, 18, and 20, the balloon constitutes a barrier preventing the extrusion of the gas. Both the annulus augmentation device and the nuclear augmentation material are removable (col. 6, lines 43-46). When using a liquid as the nuclear augmentation material, it is capable of changing phase (col. 6, lines 36-39) and can comprise a pharmacologically active agent (col.10, line 64- col. 11, line 4).

Art Unit: 3738

Please Note: This application adds and claims additional disclosure not presented in the prior application. The claims based on the new disclosure (claims 6-7, 10-11, 13-16, 18, and 20) receive the filing date of the present application for determining priority. In addition, because the nuclear augmentation material of the prior art selected for claim 9 was a gas, the limitations of claims 11-29 are met.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas C. Barrett whose telephone number is (703) 308-8295. The examiner can normally be reached Tuesday-Friday between 9:00 A.M. and 6:00 P.M.
